

BISHNU PRASAD SAHU

Bhilai, India | +91 9301105706 | mebishnusahu@gmail.com | linkedin.com/in/mebishnusahu05 | github.com/mebishnusahu0595

SUMMARY

Full Stack Engineer with 2+ years of hands-on experience in Python, AI/ML, and Computer Vision. Shipped 10+ production projects spanning real-time inference systems, REST APIs, and open-source SDKs. Contributed to Supabase and AOSSIE, won 2 competitive hackathons, and published peer-reviewed research. Seeking to apply distributed systems and ML expertise to production AI challenges.

SKILLS

Languages: Python, TypeScript, JavaScript, C++, Go, C, SQL

Frameworks: Node.js, Express, React (Vite), Flask, .NET, TensorFlow, OpenCV

AI / ML: YOLOv8, Deep SORT, Computer Vision, Deep Learning, LLM Integration, Graph Algorithms

Databases: MySQL, MongoDB, SQL Server

Tools: Git, GitHub Actions, Docker, CI/CD, REST APIs, CMake, Power BI

Concepts: Real-time Inference, Agentic AI, Data Pipelines, Distributed Systems, Red-Black Trees

EXPERIENCE

Full Stack Developer | Oncorg | Remote Apr 2025 – Present

- Delivered 3+ full-stack C# / .NET web applications in an agile team, reducing average feature delivery time by ~30% through reusable REST API components.
- Optimized SQL Server queries for high-frequency data operations, cutting average API response time by 40% across core endpoints.

Open Source Contributor | Supabase | Remote Jan 2026 – Present

- Fixed a storage URL initialization bug in supabase-py that affected 100% of storage SDK calls, preventing runtime failures across all client environments.
- Added 12+ unit tests for Sync and Async clients covering 5 base URL edge-case scenarios, raising storage module test coverage from 0% to measurable baseline.

Full Stack Developer | Code2Dbug | Bhilai, India Jan 2026 – Feb 2026

- Built and deployed 4 full-stack web applications using Node.js, Express, and React (Vite) within a 6-week engagement, all delivered on time.
- Resolved critical frontend-backend integration failures across 2 legacy projects, reducing reported user-facing errors by over 80%.

Freelance Developer | Self-Employed | Remote Apr 2025 – Present

- Completed 10+ client projects across AI, computer vision, data science, and web development with a 100% on-time delivery rate.
- Published 3+ open-source ML and automation tools on GitHub accumulating active usage across the developer community.

AI Developer | CogniAble | Remote Sep 2024 – Nov 2025

- Engineered a real-time person detection and tracking system using YOLOv8 + Deep SORT, achieving 95%+ tracking accuracy across multi-subject therapy session videos.
- Processed and annotated 50+ hours of video data, enabling researchers to extract behavioral pattern insights 3x faster than manual review.

Open Source Contributor | AOSSIE | Remote Apr 2024 – Jun 2025

- Resolved TailwindCSS / PostCSS ESM configuration conflict that blocked all CI builds, restoring a stable pipeline and unblocking 5+ contributors.
- Added TypeScript support, GitHub Actions CI/CD, and Docker configuration, reducing manual deployment steps by ~60% and eliminating environment-related onboarding failures.

PROJECTS

FAMS — AI Medical Assistant | *Python, Computer Vision, Voice AI*

- Developed real-time visual assessment and voice-guided diagnosis pipeline using computer vision + LLM integration, winning 2nd place at AR 2025 (Bhilai, India) out of 80+ teams.

Computed Fields Engine (Notion/Airtable-style) | *TypeScript, Node.js, System Design*

- Designed a generic computed fields system enabling formula-based derivation (e.g., Price * Quantity, FullName).
- Built dependency graph with topological sorting and circular dependency detection.
- Resolved AsyncLocalStorage execution issues to ensure safe server-side evaluation and consistent data updates.

SamarthyaBot — AI Agent OS | *Node.js, Automation, Multi-Agent AI*

- Build a privacy-first, self-hosted AI agent enabling autonomous workflows (code, browser, deployment) with multi-LLM integration and secure local memory

Money Muling Detector (PWIOI) | *C++, React, TypeScript, Graph Algorithms*

- Designed AI-powered financial fraud engine identifying money muling and smurfing patterns using custom Red-Black Tree + Decision Tree algorithms at $O(N \log N)$ across 10,000+ transactions, winning RIFT Hackathon (Bangalore, India).

FarmView AI — Smart Crop Monitoring | *YOLOv8, OpenCV, Machine Learning*

- Created real-time computer vision system detecting 5+ categories of crop disease, pest, and nutrient deficiency from live camera input, presented at HackOmania 2025.

Agentic Honeypot — Cyber Threat Detection | *Python, AI Agents, Security*

- Designed agent-based AI honeypot simulating vulnerable services to attract and analyze attacker intrusion patterns, capturing structured threat intelligence automatically.

Kuya Cloud — Data Analytics Platform | *Python, Data Processing, Visualization*

- Created rule-based analytics and automated visualization platform enabling non-technical users to explore datasets with zero code; published peer-reviewed research (Zenodo, doi:10.5281/zenodo.18803300).

EDUCATION

Bachelor of Computer Applications | Rungta College of Science and Technology | India Aug 2023 – Apr 2026

Generative AI Certification | NULL Class | Remote Apr 2024 – Aug 2025

AWARDS

- 2nd Place — AVISHKAR 2025, FAMS AI Medical Assistant (Bhilai, India, 80+ teams)
- Winner — RIFT Hackathon, Money Muling Detector / AI Financial Fraud Detection (Bangalore, India)
- Finalist — HackOmania 2025, FarmView AI Crop Monitoring System (Bhilai, India)
- Participant — MumbaiHacks 2025, FEZI Autonomous Fact-Verification System (Mumbai, India)
